

Sentiment Analysis using Twitter for the EU Referendum

ITNP096 Dissertation Project

Josh Hart - 2422389

Abstract

Sentiment analysis requires collecting, processing, cleaning and analysing data for patterns in emotions and expression. With the EU Referendum on the horizon we will be collecting data from the social sites in the month running up to the result and analysing it for patterns in sentiment, any changes and looking for correlation with how it stacked up against the polls as well as the media.
