## **Abstract**

This system uses the PHP dynamic web development technology, takes MySQL as the backstage database, uses Apache to dispose the Web server, unifies HTML and CSS, and finally realizes the B/S pattern-based individual diary publishment and exchange platform - individual blog system. The full text is mainly divided into 6 parts: The 1st part mainly introduces the characteristics and background of the individual blog system, as well as the development environment that this system will use; The 2nd part elaborates the feasible analysis of the system; The 3rd part mainly analyzes the various functions and performance demands of the system, makes the plan and assignment of the system function that each module must complete; The 4th part is the various technologies that would be used in the database design and development of the system; The 5th part introduces the detailed designs of the system, introduces the detailed design process of each module one by one of the system; The 6th part is about the tests.
