

# Big Data Recipes

Rebecca Oakes

MSc in Big Data

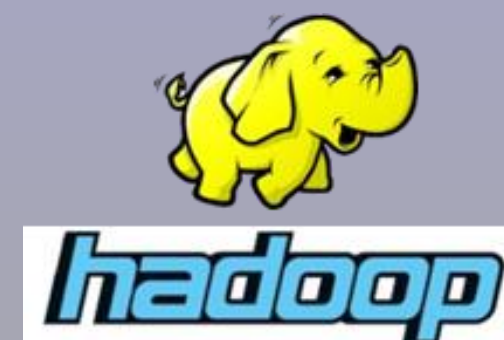

The project, in conjunction with another, is to create a website with examples to assist users in a similar fashion to sites such as StackOverflow and GitHub. However, the site being created is Big Data orientated and the Examples, which is my side of the project, will therefore all be of a Big Data orientation.

1. SQL Queries From a Relational Database
2. Querying a relational database using R
3. Requires the DBI Package
4. The first line of code shows how to perform a Get query in R, where the variable which holds the connection and the query to be put to the database are both passed as parameters to the dbGetQuery method which ...
5. 

```
storedQuery <- dbGetQuery(con, "SQL query")  
res <- dbSendQuery(con, "SQL query")  
dbFetch(res)  
dbClearResult(res)
```
6. R

In this project, the aim is to create several different pieces of code examples for a website specifically designed for aiding users of Big Data. Each example will have different pieces of information including explanation of the code, programming language used and any installation required.

Languages being used in this project

mongoDB

python
