

Computer Based Aptitude Test System

Frank Mbah

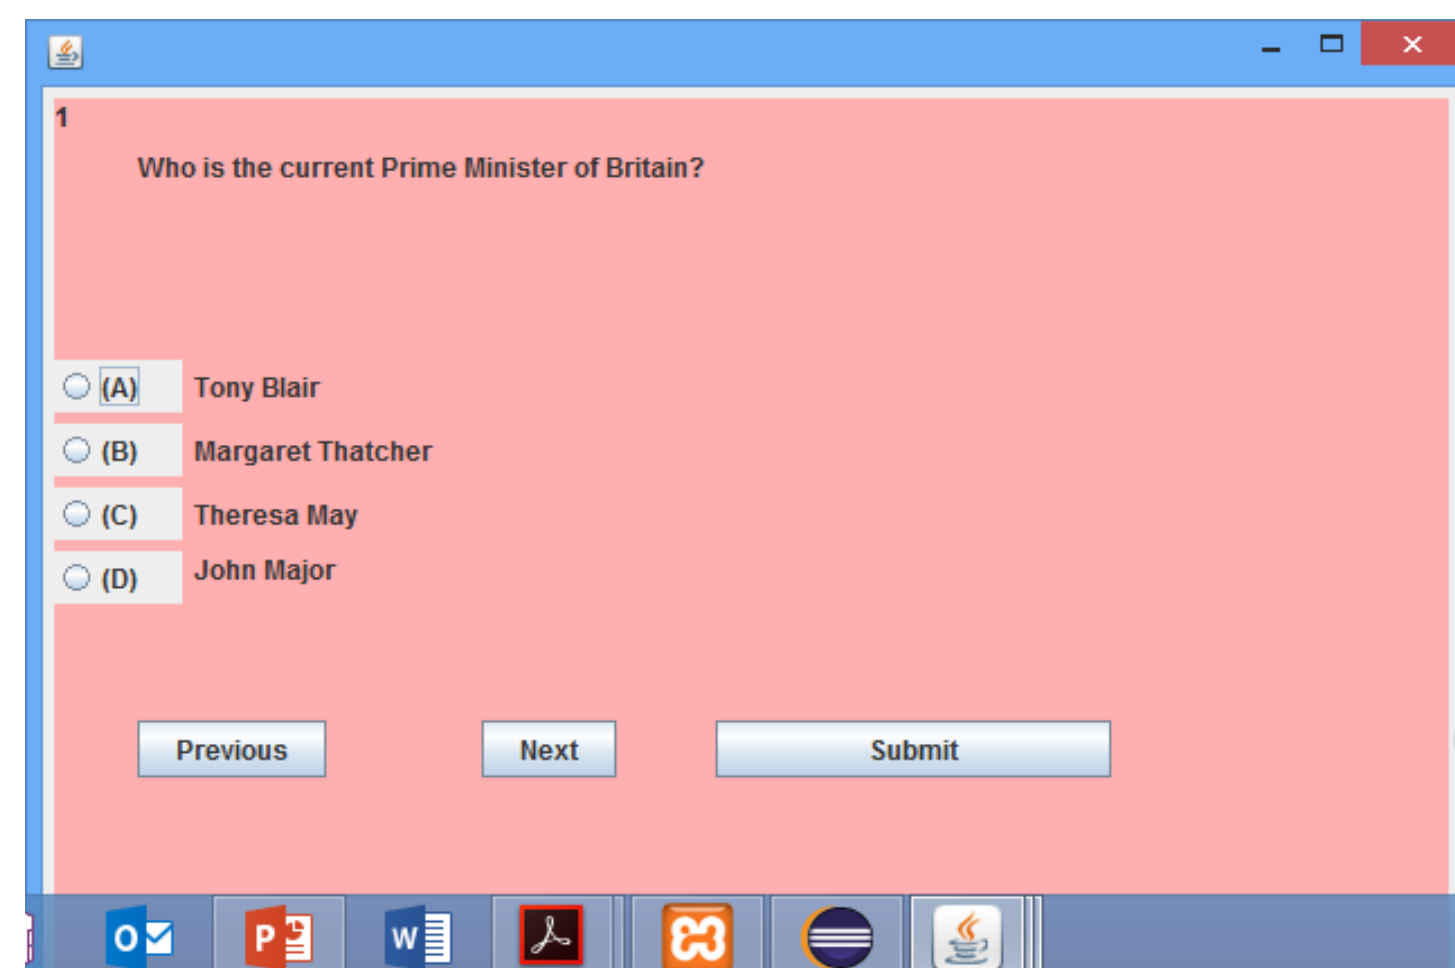

MSc in Information Technology

UNIVERSITY of
STIRLING

Timely output is required for every productive endeavour. The Computer based Aptitude Test System is aimed at having a timely and secured output in accessing students of secondary schools in their various subjects using objective questions.

- Subject Teachers upload the questions with their optional answers. They also schedule the examination date with which the student is granted access together with the subject name after logging in.
- The system's countdown timer regulates the time for the test using the duration set by the subject Teacher. At the end of the examination, the student's score is immediately obtained by clicking the appropriate button.

I am partnering with Alpha Academy, a private Secondary School in Port Harcourt Nigeria, to deploy this for their use.

Other areas that this application can be adapted for guaranteed timely output are:

- National and International examinations such as AQA, OCR, EDEXCEL, Cambridge Assessment Admissions Testing, IELTS and TOEFL.
- Job interviews
- Opinion polls
- Electronic voting systems

The following Technologies are being used for the implementation.
