MSc in Financial Technology

This FinTech app is basically online ordering system. The aim is to solve long queue and time consuming. The user allow to choose the menu from the apps and claim it by scanning the QR code on the restaurant's table. The app also implemented direct payment across multiple platform without delay or third party hardware.

The food is ready to be served. The user can see the bill and the transaction details from the apps.

The system send a notification to cashier and require to be approved. As soon as its approved, the money is instantly credited to restaurant account

The users allow to order the food through the apps. Then the order is stored in local storage.

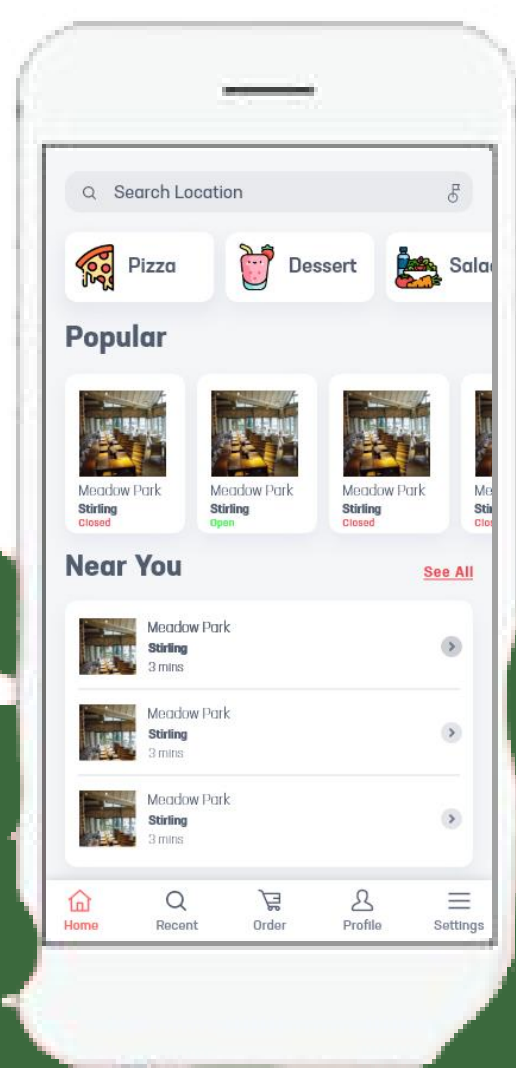

The users come to the restaurant and scan the QR code on the table to proceed the order. Immediately, the order is now processing.
