

Project Engineer Roles at Lighthouse

Lighthouse is a growing company and currently has vacancies for Graduate Project Engineers in our Project Implementation group.

We are looking to recruit graduates with a software design related degree (e.g.: ITMB, Computer Science, Software Engineering). You will be a high achiever with excellent results and a first class or 2:1, and be passionate about providing superior solutions. We are looking for ambitious, energetic and committed individuals with a proven ability to achieve at a high level, who have unbounded enthusiasm and a keen interest in improving their craft in every waking hour!

Key skill requirements for the Project Engineer role are ...

- Excellent communication skills
- Placement or working experience of C#, Vb.Net ideally, although demonstrated Java or C++ experience would be considered
- Sound understanding of database coding, especially writing SQL. An understanding of stored procedure development would be advantageous but not essential
- Understanding of HTML and CSS
- A long term interest in programming

Our Web-based Manufacturing Execution Systems (MES) application – Shopfloor-Online – is a configurable solution that helps manufacturing companies achieve measurable improvements in efficiency, output, compliance, quality and customer satisfaction. It provides integrated real-time information from across the entire manufacturing environment.

The customer base for Shopfloor-Online is growing quickly and each new project takes us into new and challenging areas. A Shopfloor-Online project implementation demands that the project team understand a customer's business, their manufacturing process and operational challenges. Implementing Shopfloor-Online requires that the product is customised to fit each new situation - providing a perfect business fit.

As a project engineer your job will involve ...

- Designing and configuring Shopfloor-Online solutions
- writing SQL to implement complex custom reports
- developing links to factory devices, databases and ERP systems
- writing stored procedures
- building dynamic, responsive web-solutions
- writing C# interface scripts

At Lighthouse you will be a big cog in a small wheel and make a real difference. The projects team works closely together to produce a focused, motivated and ambitious unit. If you would like to stretch yourself in a challenging environment working to ambitious timescales with a definite sense of achievement, then Lighthouse could well suit you.

About Lighthouse

Lighthouse Systems has a fantastic team able to develop and deliver big systems. The work is varied and exciting; covering all aspects of the design cycle, involving lots of customer interaction and often requires on-site periods at European locations as part of the implementation cycle.

We work with some of the biggest names in manufacturing, such as Toyota, Nissan and Volvo in the automotive area; Airbus in aerospace; Crown and Rexam in packaging; as well as many other clients.

Our head office is in Pease Pottage, Crawley, where we have a team of developers, project engineers and sales, and we also have offices in America and Singapore.
